Bhopal, Madhya Pradesh, India

SUMMARY

Data Analyst | Machine Learning Practitioner | Integrated M.Tech (CSE — Computational & Data Science), VIT Bhopal (CGPA: 7.68/10.0). Skilled in Python, SQL, Machine Learning, MERN, Data Analytics, Data Visualization, and Excel. Builds regression models, recommendation engines, and full-stack applications that turn raw data into measurable product outcomes.

EDUCATION

VIT Bhopal University — Bhopal, India 2022 – 2027

Integrated M.Tech. — Computer Science and Engineering (Computational and Data Science) | CGPA: 7.68 / 10.0

EXPERIENCE

MERN Full Stack with AI Internship Program Nov 2025 – Dec 2025

Intern — Remote

- Completed an intensive 6-week internship in full-stack web development using the 4-technology MERN stack (MongoDB, Express.js, React.js, Node.js), integrating AI-based features into 2+ full-stack applications.
- Architected and deployed 2 responsive, scalable web applications end-to-end, developing 10+ RESTful API endpoints, managing MongoDB databases, and implementing secure JWT-based authentication systems.
- Delivered 3 AI-assisted features — intelligent recommendations, workflow automation, and data-driven insights — that enhanced the user experience across project deliverables.
- Strengthened problem-solving, debugging, and deployment skills across the full software development lifecycle, applying structured code review, Git version control, and Agile sprint practices across 2+ collaborative cycles.

PROJECTS

DocuMind — URL *Python, FastAPI, Streamlit, Docker, GitHub Actions*

- Built an end-to-end RAG pipeline that ingests documents, embeds them locally, and retrieves relevant context using a two-stage bi-encoder + cross-encoder reranking approach to improve retrieval precision.
- Designed a grounded prompting strategy with mandatory source citations, reducing hallucination risk by constraining generation strictly to retrieved context.
- Built a custom evaluation harness measuring retrieval quality (Recall@k, MRR) against a labeled question set and answer faithfulness/relevance via LLM-as-judge scoring.
- Shipped the system as both a FastAPI REST service and a Streamlit chat interface, containerized with Docker, with automated testing via GitHub Actions CI.

Sentiment Analysis Dashboard — URL *Python, RoBERTa, TF-IDF, Streamlit, Plotly*

- Built an end-to-end NLP dashboard that classifies customer reviews as positive/neutral/negative using a pretrained transformer model (RoBERTa), with automatic fallback to a lighter model for reliability.
- Engineered a TF-IDF-based keyword extraction pipeline to surface the specific issues driving negative sentiment, and implemented threshold-based spike alerts to flag sentiment drops over time.
- Designed a modular architecture (separate preprocessing, model, and analytics layers) and deployed an interactive Streamlit + Plotly dashboard supporting live filtering, CSV upload, and data export.

TECHNICAL SKILLS

AI Tools & Workflow Automation: AI-assisted development, prompt engineering, ChatGPT/Claude for research & workflow automation, AI-driven recommendation systems

Data Analysis & Insights: Data Analysis, Data Visualization, Tableau, Microsoft Excel, Trend & Feature Analysis

Cross-Functional Collaboration: Collaborating with engineering & design on feature development, Git, Agile / version-controlled workflows

Web & Full-Stack Development: MongoDB, Express.js, React.js, Node.js, REST APIs, JWT Authentication

Languages: Python, C++, SQL

CERTIFICATIONS & ACHIEVEMENTS

- Machine Learning — Coursera
- Machine Learning — NPTEL
- Solved 100+ DSA problems on LeetCode/Codeforces covering data structures, dynamic programming, and graph algorithms.
- Tackled 10–20 SQL problems on LeetCode covering queries, joins, aggregations, and data manipulation.
